

TL/Time©

Time And Attendance Labor To Job

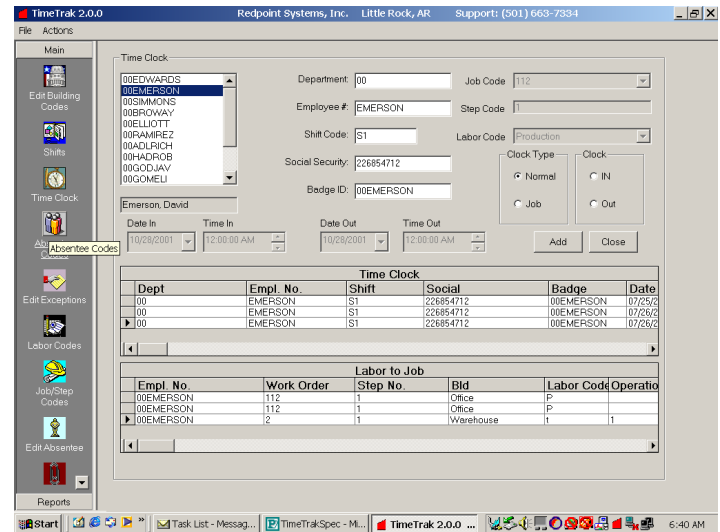

Fully Automated Time and Attendance and Labor to Job Data Collection and Reporting in an Easy to Use Application

Solve all of your Time and Attendance and Labor to Job needs with our fully automated data collection solution — TL/Time©. With TL/Time© you can rest assured that you are working with the most up to date and accurate information for those important payroll and job costing requirements.

Robust and secure Windows® based TL/Time© utilizes and supports the most current technologies and works with just about any ODBC compliant database, insuring platform independent database support. TL/Time© provides full bar code support for AIDC hardware platforms such as Linx fixed position data terminals and portable data collection devices. Implemented as independent modules with user defined controls, you tailor the system to meet your business specific needs.

How does it work? The user scans or swipes the employee badge using the Linx terminal or a hand held portable data collection terminal. If the task is T&A the user clocks in or out through the use of predefined function keys. For Labor to Job the user will scan the appropriate job code and optional operation and step codes, selecting the appropriate function (on or off job, etc) from the predefined function keys. It's as easy as that!

If your configuration includes real time connectivity to the host computer, the collected data will be immediately validated by TL/Time© and databases updated. If your environment requires batch hand held devices, the collected data is uploaded to the host computer periodically, and the databases are updated as the upload occurs.

Key Features

- Utilizes PC desktop as well as automated data collection
- Robust user defined employee shift definition
- Easy to use employee set up
- Multi-tiered job control — job code, operation, step, and labor codes
- Easy to use exception handling and maintenance
- Third party ad-hoc reporting support
- Complete absentee tracking
- Flexible data import and export capabilities
- Support for a wide range of automated data collection devices
- Fully integrated with Redpoint Systems' inventory management and work in process application — TrakLand/2000®
